Tide Triadimefon 43 SC™ is a turf and ornamental systemic fungicide [acropetal penetrant]. The product is a water-based formulation that is highly compatible with most spray equipment, including tank and hand-held spray guns or wands, backpack sprayers, hand pump sprayers and ride-on sprayers. The label displays a “Caution” signal word, the lowest toxicity category.

This product can be applied to residential and commercial turf, golf courses, sod farms and ornamental plants. It is absorbed rapidly and works systemically from within the plant. Its active ingredient has been highly regarded for more than 30 years in the United States’ turf and ornamental markets.

Compatible with many registered insecticides and fungicides, Tide Triadimefon 43 SC™ is an excellent tank-mix partner with strobilurin and succinate dehydrogenase inhibitor (SDHI) fungicides, as well as pigments and nutritional products.

Tide Triadimefon 43 SC™ contains the same active ingredient as in Bayleton®, Tartan® and Armada®. The fungicide is labeled for control of a broad spectrum of turf and ornamental diseases, including fairy ring, dollar spot, brown patch, pink and gray snow mold, anthracnose, summer patch, zoysia patch, ornamental blight, spot mildew, rust diseases and many more.

Tide International USA, Inc. partners with selective distribution to offer insecticides, miticides, herbicides, fungicides and plant growth regulators that fulfill the needs of golf course superintendents, lawn care professionals, landscapers and nursery/greenhouse operators.

Always refer to the actual label on the product for content, mixing, registered crops and application information. Always read and follow label directions.
