

# BioBoost Nest

Where Bacteria Loves to Live

## If your pond has problems, you need a Nest!

### Why Does My Pond Need a BioBoost Nest?

If your pond is struggling with algae growth, invasive weeds, foul odor, fish deaths and murky water, you might have a nutrient problem. You can fight nutrient overload by powering up your beneficial bacteria, which consumes these nutrients.

### MORE BACTERIA = FEWER NUTRIENTS

Beneficial Bacteria loves to colonize in a **BioBoost Nest**, where it creates a thick coating of "gunk", known as biofilm.

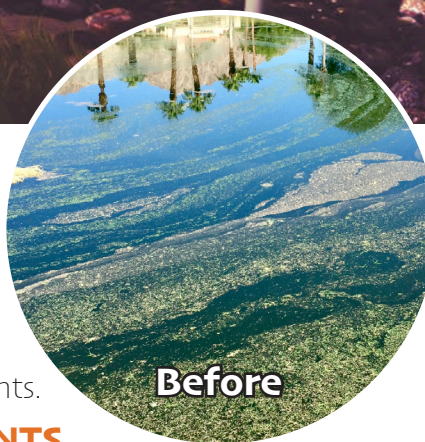

Bacteria circulates in water, often without a place to call home. But when beneficial bacteria encounters a **BioBoost Nest**, it rapidly multiplies and develops into a nutrient-hungry force.

As the bacteria devours excess nutrients in the water body, it depletes algae's food source.

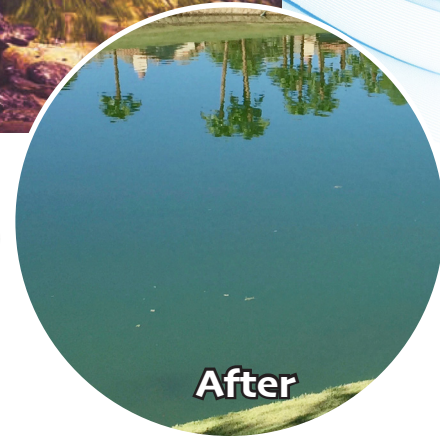

### Part of an Earth-Friendly Aquatic Ecosystem

**BioBoost Nests** are perfect if you're looking for a non-chemical approach to maintaining healthy water

- Durable, inert material with no leaching
- Non-clogging and maintenance-free
- Easy and quick to install
- Non-reliant on chemical treatments
- Safe for children, pets, fish and wildlife
