

Peak Performance with Flexibility

ETQ FLEX™

Our exclusive Enhanced Turf Quality™ (ETQ) technology combines a proprietary complex blend which provides maximum protection against heat and drought stress events. ETQ Flex™ technology is absorbed into the plant, providing protection all the way to the roots. The harmful effects of UVB and UVA are diminished, while the plant is protected, allowing critical functions like respiration and photosynthesis to function normally, optimizing plant health.

Maintain healthy turf with the flexibility of use on golf courses, athletic fields and residential lawns. Ultimately, turfgrass professionals can preserve healthy turf under extreme heat and drought stress conditions.

University Greenhouse Trial Untreated vs. ETQ

Application Schedule

For spray intervals of 14 days: Apply 1.0oz / 1,000 sq. feet

For spray intervals of 21 days: Apply 2.5oz / 1,000 sq. feet

Key Benefits

- Supports and maintains healthy root mass
- Maintains leaf water content under stress
- Maintains chlorophyll content under stress
